To Whom It May Concern:

Re: Church & Dwight Co., Inc. Arm & Hammer™ Flow K™ Potassium Bicarbonate Natural Status

While there is no official or generally accepted definition of “natural” ingredients, we offer the following information so that users of Church & Dwight Co., Inc. Flow K™ Potassium Bicarbonate can evaluate and make their own decisions.

The production of potassium bicarbonate begins with naturally occurring potassium chloride and requires no more than minimal processing. Potassium chloride is electrolyzed to form potassium hydroxide. Carbon dioxide is bubbled through potassium hydroxide to form potassium carbonate and then potassium bicarbonate.

Once potassium bicarbonate is formed, centrifuging and drying separate the process water from the product. Reclaimed solution is returned to the process thereby avoiding waste.

The potassium bicarbonate, which now meets USP standard, is blended with a small amount of Magnesium Oxide USP to ensure free flow.

Flow K™ Potassium Bicarbonate does not contain any artificial flavor or flavoring, coloring ingredient, or chemical preservative (as defined in 21 CFR 101.22).

No sewage sludge, genetically modified organisms, plant or animal products, or irradiation are used in the manufacture of Flow K™ Potassium Bicarbonate.

Please feel free to contact me with any questions.
