**Re: Church & Dwight Co., Inc. Arm & Hammer™ Sodium Bicarbonate and Sodium Bicarbonate Blends
Storage and Handling**

Store sodium bicarbonate in a cool dry area, away from incompatible substances such as strong acids and bases. Sodium bicarbonate reacts with acids to yield carbon dioxide gas which can accumulate in confined spaces. Sodium bicarbonate decomposes at elevated temperatures (above 100°F) to produce sodium carbonate, carbon dioxide and water.

Sodium bicarbonate must be stored separately from all toxic or other hazardous products. Sodium bicarbonate is a superior odor absorber and should be kept separate from all products with odors.

Sodium bicarbonate may be stacked on pallets or racks. It is recommended that pallet stacks not exceed three high to reduce compaction. Shipments of pallets should be single stacked and the condition of the shipping vehicle checked for cleanliness and odor. If a bag is torn during warehouse handling or vehicle loading, the bag should be removed from the unit and disposed of, especially in the case of food grades.

Product should be stored away from walls in a clean warehouse. The use of any chemical fumigant not approved by a manufacturer for food applications is prohibited. The use of ethylene dibromide (EDB) is specifically prohibited for fumigation in warehouses storing sodium bicarbonate.
