To Whom It May Concern:

**Re: Church & Dwight Co., Inc. Arm & Hammer™ Sodium Bicarbonate USP Residual Solvents Statement**

Church & Dwight Co., Inc. Sodium Bicarbonate USP, does not require Residual Solvents testing under the USP <467> Organic Volatile Impurities / Residual Solvents stipulation.

No Class 1, Class 2 Class 3 or other solvents are used in the manufacturing process. Further, based on our knowledge of the manufacturing process and procedures, and controlled handling and storage of the sodium bicarbonate, there is no potential for residual solvents to be present if tested.

The sodium bicarbonate manufacturing process begins with the dissolution of sodium carbonate in purified water. Carbon dioxide is bubbled through the sodium carbonate solution and sodium bicarbonate is formed. The sodium bicarbonate is recovered as a wet cake. Water is removed from the sodium bicarbonate mechanically in a centrifuge and finally by drying.

If you have any questions or comments, please feel free to contact me.
