Re: Church & Dwight Co., Inc. Arm & Hammer™ Ammonium Bicarbonate Treated and Untreated Natural Status

While there is no official or generally accepted definition of "natural" ingredients, we offer the following information so that users of Church & Dwight Co., Inc. Ammonium Bicarbonate can evaluate and make their own decisions.

The production of ammonium bicarbonate begins with Ammonia, Water and Carbon Dioxide. These materials are subject only to physical treatments to drive off impurities before being brought together.

The process of making ammonium bicarbonate relies on simple manufacturing techniques such as dissolution and control of temperature to form the product. Once formed, centrifuging and drying are used to separate the process water from the product. Reclaimed solution is returned to the process thereby avoiding waste.

No sewage sludge, genetically modified organisms, plant or animal products, or irradiation are used in the manufacture of Church & Dwight Ammonium Bicarbonate.

Ammonium Bicarbonate is found in The National List of Allowed and Prohibited Substances of the National Organic Program under § 205.605 Nonagricultural (nonorganic) substances allowed as ingredients in or on processed products labeled as "organic" or "made with organic (specified ingredients or food groups(s))" (b) Synthetics allowed.

If you have any questions or comments, please feel free to contact me.
