Re: Church & Dwight Co., Inc. Arm & Hammer™ Flow K™ Potassium Bicarbonate Manufacturing Process

Potassium Bicarbonate USP is combined with less than 1% Magnesium Oxide USP in a ribbon blender. The magnesium oxide is added to improve the handling characteristics of the potassium bicarbonate in use. After mixing for a specified amount of time, the material is conveyed from the blender and passed through a stainless steel screen. The screened material is then packaged in 50 pound net weight multiwall bags.

A schematic diagram is attached.
