**Re: Church & Dwight Arm & Hammer™ Flow K™ Potassium Bicarbonate – Microbiological Risk**

The process conditions for manufacturing Flow K Potassium Bicarbonate are sufficiently harsh (high temperature, high pH) that microbiological activity due to raw materials or exposure during processing (closed system, continuously operated) is not a significant risk.

Because of its low water activity, Arm & Hammer Flow K Potassium Bicarbonate powder does not support microbiological growth.

Feel free to contact me with any questions.
